The Department of Comparative Medicine (DCM) in the College of Medicine at the Medical University of South Carolina (MUSC) is seeking a clinical veterinarian eligible for a tenure-track faculty rank of Assistant Professor. The Division of Laboratory Animal Resources (DLAR) within the DCM is responsible for the care and use of all laboratory animals at MUSC. The successful candidate will have an interest and experience in the creation of surgical models. Board certification by the American College of Laboratory Animal Medicine is preferred, but board-eligible candidates will be considered. A SC license to practice veterinary medicine and USDA accreditation must be obtained within one year of employment. Salary will be commensurate with qualifications.

The clinical veterinarian will work in tandem with other veterinarian faculty in the department to support a collaborative research environment in a well-established, AAALAC-accredited program. Investigator research primarily utilizes rodents and swine across a diverse spectrum of biomedical research including immunology, oncology, neuroscience, and gnotobiotic models. Veterinarians are an integral part of ongoing surgical research, in fields as varied as orthopedics, neurosurgery, and cardiovascular remodeling.

The ideal candidate will have a strong commitment to animal welfare, promotion, and transparency of biomedical research, and will be actively engaged with department personnel and investigators. The candidate will be expected to demonstrate and model strong collaborative skills across sites and teams and will directly contribute to team success. Additionally, the ideal candidate will have experience working independently on clinical veterinary cases and be able to assist with training staff on the veterinary care and husbandry of research animals as mandated by federal law and regulations, accreditation standards, and policies as set by the MUSC Institutional Animal Care and Use Committee.

**Minimum Requirements:**
D.V.M. or equivalent, Veterinary License
