Clinical Veterinarian III  
Charles River Laboratories, Poolesville, MD

We are passionate about our role in improving the quality of people’s lives. We are currently looking for a CVIII to join our Insourcing Solutions team to support our NIH client. We offer an excellent onboarding program for our new employees, internal career development, competitive benefits, and salary.

**How will you have an impact?**
This is the moment to use your talents and imagine those talents contributing to improving global health and peoples’ lives. In the CVIII role you can do that by providing clinical veterinary support that is integral to the integrity of the animal research program.

**What you will do!**
In the Clinical Veterinarian III role, you will use existing SOPs and quality assurance standards to diagnose and provide treatment plans for rodent and nonhuman primate species, and you will successfully cross-train other veterinarians in those animal models, research-specific tasks, and procedures learned. You will lead, train and mentor veterinary technicians in the evaluation, clinical care, and treatment of rodent and nonhuman primate species. You will also assess and determine proficiency of the veterinary technical staff, including evaluating the skill sets and identifying the needs of veterinary technicians in AHCS positions.

This role actively interacts with management, facility veterinarian(s), and investigators to solve customer requests, inquiries, complaints, and to provide technical assistance. You will complete in-depth reviews of protocols by non-NINDS institutes and provide input to investigators concerning their research and plans for animal health and wellbeing; as well as review existing policies, make recommendations, and implement changes. In addition, read and review animal study proposals to provide input to the veterinary care aspect of the research proposed, and review and monitor protocols in progress to ensure that animal surgeries and procedures are performed as approved. As well as inspect facilities for semiannual, annual, and periodic reviews by the ACUC, OACU, and AAALAC, etc.

**Who are we looking for?**
A candidate with a DVM is required; and a minimum two years of relevant veterinary experience with laboratory animals, specifically primates (OW and NW). Board certification in laboratory animal medicine required, as well as a current state license.

The pay for the position is $155,000 annually.
